

## **Crop Recommendations for Corn**

**Apply Vitazyme at planting with one of the following methods:**

**Dry Planters:**

With herbicide either before or after planting (either before or shortly after emergence) at the rate of 1 liter/hectare (13-16 oz/acre)

**or**

**Liquid Planters:**

In furrow or 2x2 through liquid attachment on the planter. For small plots spray a 1% solution directly on the seeds in furrow before the row is closed at the rate of 1 liter/hectare (13-16 oz/acre)

**or**

With glyphosate on Roundup Ready corn.

For best results 2 applications are recommended, one at planting, and another at 5-6 leaves, or with glyphosate on Roundup Ready crops.

***Vitazyme can be tank mixed with all farm chemicals, including herbicides, insecticides, fungicides, and fertilizers.***

***Added benefit: when mixed with herbicide, Vitazyme will stimulate weed growth, thereby enhancing herbicide efficacy.***
