

## Crop recommendations for Millet

### At Planting:

- Treat the seed with Vitazyme at the rate of 1 liter/hectare or apply with herbicide and/fertilizer either before or after planting at the rate of 1 liter/hectare (13-16oz/acre).

### Head In The Boot Stage:

- A second application is recommended at the boot stage approximately 30-45 days after planting at the rate of 1 liter/hectare (13-16oz/acre).

*Vitazyme can be tank mixed with all farm chemicals, including herbicides, insecticides, fungicides, and fertilizers.*

*Added benefit: when mixed with herbicide, Vitazyme will stimulate weed growth, thereby enhancing herbicide efficacy.*
