

Crop Recommendations for Wheat, Barley, and Oats

Spring Wheat, Barley, and Oats:

- Treat the seed with Vitazyme at the rate of 1 liter/hectare or apply with herbicide and/or liquid nitrogen either before or after planting at the rate of 1 liter/hectare (13-16oz/acre).
- A second application is recommended approximately 30 days at the rate of 1 liter/hectare (13-16oz/acre).

Winter Wheat and Barley:

- Fall treatment: treat the seed with Vitazyme at the rate of 1 liter/hectare (13-16 oz/acre) before planting or apply by sprayer either before or after planting at the rate of 1 liter/hectare (13-16 oz/acre).
- Spring treatment: apply with herbicide and/or liquid nitrogen at the rate of 1 liter/hectare (13-16 oz/acre).

Vitazyme can be tank mixed with all farm chemicals, including herbicides, insecticides, fungicides, and fertilizers.

Added benefit: when mixed with herbicide, Vitazyme will stimulate weed growth, thereby enhancing herbicide efficacy.
