

Crop recommendations for Peanuts

Apply Vitazyme at planting with one of the following methods:

Dry Planters:

With herbicide either before or after planting (either before or shortly after emergence) at the rate of 1 liter/hectare (13-16 oz/acre).

or

Liquid Planters:

In furrow or 2x2 through liquid attachment on the planter. For small plots spray a 1% solution directly on the seeds in furrow before the row is closed at the rate of 1 liter/hectare (13-16 oz/acre).

Apply again at the rate of 1 liter/hectare (13-16 oz/acre) at early bloom or approximately 30 days after planting.

Vitazyme can be tank mixed with all farm chemicals, including herbicides, insecticides, fungicides, and fertilizers.

Added benefit: when mixed with herbicide, Vitazyme will stimulate weed growth, thereby enhancing herbicide efficacy.
