

Crop Recommendations for Lettuce, Chinese Cabbage, Celery, Radishes, Spinach, and Herbs

Apply Vitazyme with herbicide or irrigation either before or after seeding at the rate of 1 liter/hectare (13-16 oz/acre).

One application is enough for short cycle crops of 45 days. For crops up to 60 days a second application at the rate of 1 liter/hectare (13-16 oz/acre) approximately 30 days from planting will give maximum effect.

Vitazyme can be tank mixed with all farm chemicals, including herbicides, insecticides, fungicides, and fertilizers.

Added benefit: when mixed with herbicide, Vitazyme will stimulate weed growth, thereby enhancing herbicide efficacy.
