

## **Crop Recommendations for Strawberry, Blueberry & Raspberry**

### **New Plantings**

Transplanting: dip the roots in a 1% Vitazyme solution at planting, or spray them with a 5% solution. Alternatively, the plants can be watered through the planter or soon after planting with a sprayer at the rate of 1 liter/hectare (13-16 oz./acre).

After planting: Spray Vitazyme at 1 liter/hectare (13-16 oz./acre) to the leaves and soil every 30-45 days.

### **Established Plantings**

**Apply Vitazyme to the leaves and soil at the rate of 13-16 oz/acre:**

- In early spring when plants emerge from dormancy.
- At early bloom.
- At half fruit size.
- 30-60 days after harvest.

*Vitazyme can be tank mixed with all farm chemicals, including herbicides, insecticides, fungicides, and fertilizers.*

***Added benefit:** when mixed with herbicide, Vitazyme will stimulate weed growth, thereby enhancing herbicide efficacy*
