

Crop Recommendations for Turf Grass

New Plantings:

Apply 1 liter/hectare (13-16 oz./acre) before or after planting (either pre or post emergence) with either a sprayer or hydroseeder (mix Vitazyme into the hydroseed solution).

Apply 1 liter/hectare (13-16 oz./acre) every 30-60 days during the growing season.

Established plantings:

Apply 1 liter/hectare (13-16 oz./acre) at Spring greenup.

Apply 1 liter/hectare (13-16 oz./acre) every 30-60 days during the growing season.

Vitazyme can be tank mixed with all horticultural chemicals, including herbicides, insecticides, fungicides, and fertilizers.

Added benefit: when mixed with herbicide, Vitazyme will stimulate weed growth, thereby enhancing herbicide efficacy.
